TEST REPORT # 316053 A
LSR Job #: C-2395

Compliance Testing of:
Sterling LWB

Test Date(s):
May 6th to June 10th 2016

Prepared For:
Attention: Josh Bablitch
LSR
W66N220 Commerce Ct.
Cedarburg, WI 53012

This Test Report is issued under the Authority of:
Khairul Aidi Zainal, Engineering Manager-Test Services.

Signature:  Date: 7/19/16

TABLE OF CONTENTS

EXHIBIT 1. INTRODUCTION

1.1 - Scope

Normative References:	Article 2 Paragraph 1 of the Certification Ordinance ARIB STD-T66 V2.1 "Second Generation Low Power data Communication System/Wireless LAN System" ARIB STD-T33 1 "Low Power data Communication System/Wireless LAN System" Ordinance Regulating radio Equipment
Purpose of Test:	To test for compliance against the requirements of the Japanese Radio Law for products operating under category WW and Article 2 item (19)
Test procedures:	Radio Law (Law No. 131) Ministerial Ordinance No. 37 (Rules Concerning Technical Regulations Conformity Certification of Specified Radio Equipment) Ordinance Regulating Radio Equipment MIC notice 88 (test methods and appendix to Post of the Ministerial Ordinance N0.37)

1.2 - LS Research, LLC Test Facility

LS Research, LLC is accredited by A2LA (American Association for Laboratory Accreditation) as conforming to ISO/IEC 17025, 2005 “General Requirements for the Competence of Calibration and Testing Laboratories”.

As an EMC Testing Laboratory, our Accreditation and Assessments are recognized through the following:

A2LA – American Association for Laboratory Accreditation

Accreditation based on ISO/IEC 17025: 2005 with Electrical (EMC) Scope of Accreditation
A2LA Certificate Number: 1255.01

Federal Communications Commission (FCC) – USA

On file, 3 Meter Semi-Anechoic Chamber based on RSS-GEN – Issue 4
File Number: IC 3088A-3

1.3 – Location of Testing

All testing was performed at the following location utilizing the facilities listed below, unless otherwise noted.

LS Research, LLC
W66 N220 Commerce Court
Cedarburg, Wisconsin, 53012 USA,

List of Facilities Located at LS Research, LLC:

Semi-Anechoic Chamber

1.4 – Test Equipment Utilized

A complete list of equipment utilized in testing is provided in Appendix A of this test report. Calibration dates are indicated in Appendix A. All test equipment is calibrated by a calibration laboratory accredited to the requirements of ISO/IEC 17025, and traceable to SI standards.

EXHIBIT 2. PERFORMANCE ASSESSMENT

2.1 – Client Information

Manufacturer Name:	LSR
Address:	W66N220 Commerce Ct. Cedarburg. WI 53012
Contact Name:	Josh Bablitch
E-mail address:	Josh.bablitch@lairdtech.com

2.2 - Equipment Under Test (EUT) Information

The following information has been supplied by the applicant.

Product Name:	Sterling-LWB
Model Number:	STERLING-LWB
Serial Number:	49

2.3 - EUT'S Technical Specifications

EUT Frequency Range (in MHz)	2412 MHz to 2472MHz
Antenna Power	☒ Conducted Measurement ☐ Radiated Measurement
Minimum (mW/MHz):	802.11b = 4.710 802.11g = 1.648 802.11n (20MHz) = 1.230
Maximum (mW/MHz):	802.11b = 6.397 802.11g = 2.307 802.11n (20MHz) = 1.652
Maximum Occupied Bandwidth and Spreading Bandwidth (99% and 90%)	90% (MHz): 802.11b =9.641 802.11g = 13.8 802.11n (20MHz) = 14.6 99%(MHz): 802.11b =13.900 802.11g = 16.900 802.11n (20MHz) = 17.900
Type of Modulation	OFDM (802.11n,g), DSSS (802.11b)
Frequency Tolerance %, Hz, ppm	Better than 50 ppm
Antenna Information	
Detachable/non-detachable	Non-detachable and detachable
Type	Chip, Dipole, FlexNotch, FlexPIFA
Gain and Pattern	Peak Gain (dBi): Chip = 1.5 Dipole = 2.0 FlexNotch = 2.0 FlexPIFA = 2.0 Pattern : Omni-directional

2.4 - Product Description

The Sterling-LWB is a multi-standard module with support for WLAN (802.11 b/g/n), and Bluetooth V2.1 and Bluetooth 4.0 & 4.1 with multiple antenna options.

This device has been designed to operate with the antenna listed below, and having a maximum gain of 2.0 dBi. The required antenna impedance is 50 ohms.

Chip Antenna: Johanson Part # 2450AT18D0100 Peak Gain 1.5 dBi

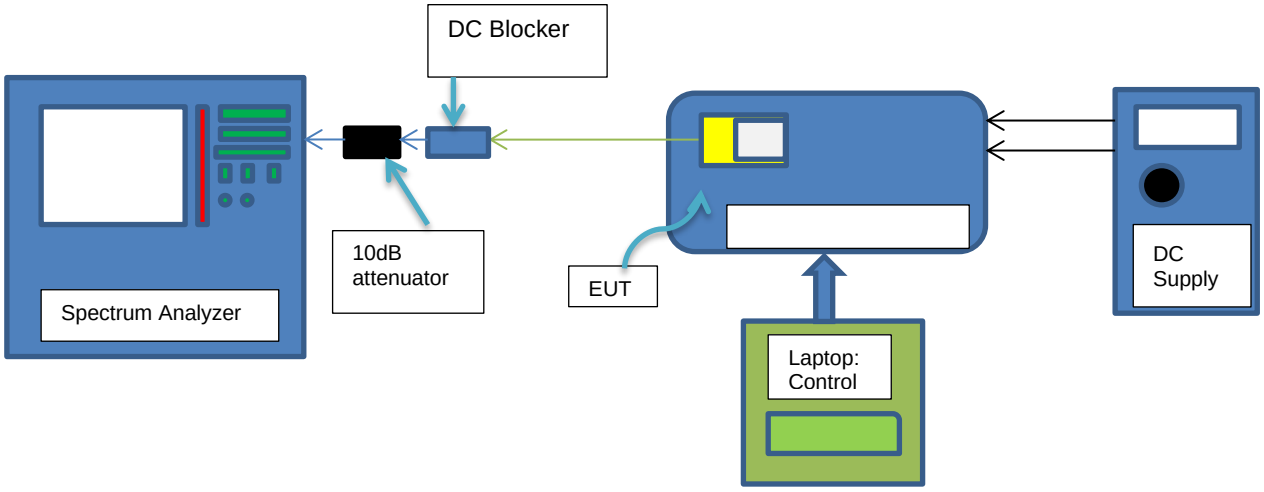
U.FL Antenna port utilizes the following antenna options:

LSR 2.4 GHz Dipole Antenna 2dBi
LSR 2.4 GHz FlexPIFA 2dBi
LSR 2.4 GHz FlexNotch 2dBi

2.5 – Test Configuration

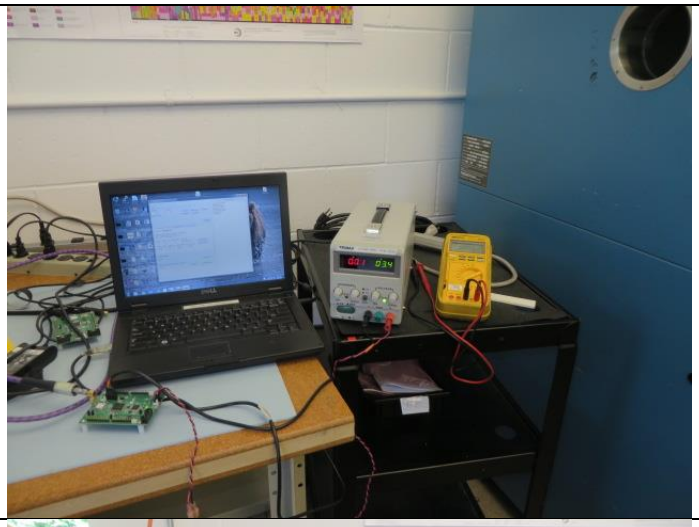
The EUT was powered using a switching mode power supply. The power supply was set to the nominal (+3.3 VDC) voltage and ±10% of the nominal voltage for testing (+3.6 VDC and + 3.0 VDC).

The EUT was connected to a laptop running the TiWi-CW RF Eval tool, Version 2.0.0.0 proprietary software. The EUT was connected to this laptop via a USB A to USB mini cable.



Test Setup photos:

Conducted Measurement Setup



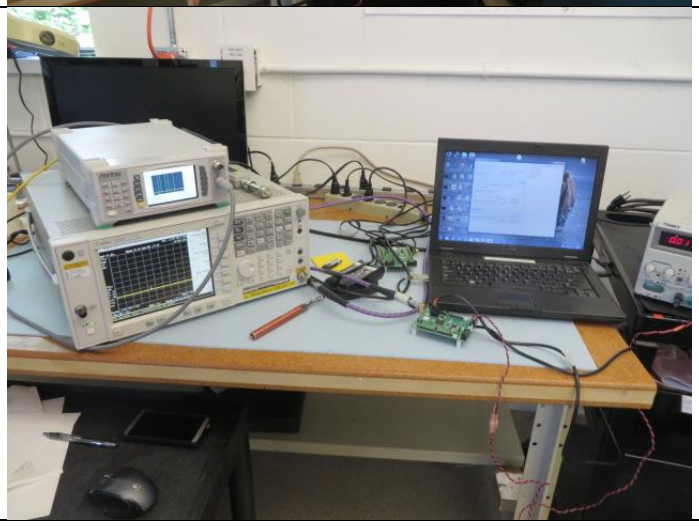


EXHIBIT 3. EUT OPERATING CONDITIONS & CONFIGURATIONS DURING TESTS

3.1 - Climate Test Conditions

Temperature:	70-71° F
Humidity:	32-35%
Pressure:	729-742mmHg

3.2 - Summary Of Test Results

Ordinance Number	Description	Compliance (Yes/No)
Article 49.20	Frequency Allocation	Yes
Article 5, Annex 1	Frequency Tolerance	Yes
Article 49.20	Antenna Power	Yes
Article 14	Output Power Tolerance	Yes
Article 49.20	Spreading Bandwidth	Yes
Article 6, Annex 2 30	Occupied Bandwidth	Yes
Article 49.20	E.I.R.P	Yes
Article 49.20	Antenna Absolute gain	Yes
Article 49.20	Spreading Factor	Yes
Article 7, Annex 3	Transmitter Spurious emissions	Yes
Article 24	Secondary/receiver emissions	Yes
Article 49.20	Dwell Time	N/A
Article 49.20	Housing Requirement	Yes
Article 9.4.9	Interference Prevention function	Yes
Article 15.1	Voltage fluctuation	Yes
Article 49.20	OFDM Sub-carriers	Yes

3.3 - Modifications Incorporated In The EUT For Compliance Purposes

☒ None ☐ Yes (explain below)

3.4 - Deviations & Exclusions From Test Specifications

☒ None ☐ Yes (explain below)

EXHIBIT 4. DECLARATION OF CONFORMITY

The EUT was found to MEET the requirements for a Direct Sequence Spread Spectrum and OFDM Transmitter device under Article 2 Paragraph 1 of the Certification Ordinance.

LS Research, LLC certifies that the data contained herein was taken under conditions that meet or exceed the requirements of the test specifications. The results in this Test Report apply only to the item(s) tested on the above-specified dates. Any modifications made to the EUT subsequent to the indicated test date(s) will invalidate the data herein, and void this certification.

EXHIBIT 5: Frequency Allocation.

Test Engineer:	Khairul Aidi Zainal
Test Date:	5/6/2016

Requirement:

The requirement per Article 49.20 of the Ordinance Regulating Radio equipment authorizes equipment within the range 2400 MHz to 2483.5MHz

Result:
The EUT was found to operate between:

1. 2412 MHz to 2472MHz for WLAN mode.

The EUT Complies with the requirements of the Ordinance regulating Radio Equipment.

EXHIBIT 6: Frequency Tolerance.

Test Engineer:	Coty Hammerer
Test Date:	4/7/2016

Requirement:

Article 5, Annex 1 tables 7-8 of the Ordinance regulating Radio Equipment has a limit of ±50ppm.

Test note:

1. EUT was set to single channel transmission (low, medium and high).
2. EUT was set to continuously transmitting un-modulated.
3. Frequency counter function of the Spectrum analyzer was used to measure the frequency.
4. Measurement performed at nominal, +10% nominal and -10% nominal supply voltage.

Result:

The EUT had a maximum deviation of 1396Hz which is better than 50ppm. The EUT complies with the requirement of the Ordinance regulating Radio Equipment.

Data:

1. WLAN mode:

	3.0 VDC	3.3 VDC	3.6 VDC	
Channel	Frequency (Hz)	Frequency (Hz)	Frequency (Hz)	Frequency Drift (Hz)
2412	2412006465	2412007301	2412005905	1396
2437	2437006708	2437006097	2437006082	626
2462	2462007066	2462006529	2462007160	631

EXHIBIT 7. Antenna Power and EIRP Power Density

Test Engineer:	Khairul Aidi Zainal
Test Date:	5/26/16 – 6/8/16

Requirement:

Article 49.20 of the Ordinance regulating Radio Equipment allows an absolute maximum (including +20% tolerance) antenna power of 10mW/MHz for a DSSS, OFDM (26MHZ occupied bandwidth) system that occupies the frequency range 2400 to 2483.5 MHz. It also allows for a maximum EIRP power density of 12.14 dBm/MHz for non-directional antennas and 22.14 dBm/MHz for directional antennas.

Test note:

1. The EUT was tested at the lowest, middle and high channels.
2. Measurement performed at nominal, +10% nominal and -10% nominal supply voltage.
3. Antenna gain used in EIRP density calculation is 2.0dBi (from data sheet)
4. Measurement procedure:
    a. Step 1:
        i. Spectrum analyzer Center frequency: Center of the channel or band
        ii. Resolution BW = 1 MHz
        iii. Video BW = 3 MHz
        iv. Detector = Average (RMS)
        v. Sweep time = 60s
        vi. Trace mode = Max Hold

    b. Step 2: Find the peak value of the envelope and record as the highest antenna power.

Result:

The WLAN (802.11b, 802.11g and 802.11n) mode of the EUT has a maximum antenna power and maximum EIRP power which are below the stated limits and is therefore found to be compliant to the requirement of the Ordinance regulating Radio Equipment.

EXHIBIT 8. Absolute Antenna Gain

Test Engineer:	N/A
Test Date:	N/A

Requirement:

The absolute maximum antenna gain allowed by Article 49.20 of the Ordinance regulating Radio Equipment is 12.14 dBi.

Result:

This device has been designed to operate with the antenna listed below, and having a maximum gain of 2.0 dBi. The required antenna impedance is 50 ohms.

Chip Antenna: Johanson Part # 2450AT18D0100 Peak Gain 1.5 dBi

U.FL Antenna port utilizes the following antenna options:

LSR 2.4 GHz Dipole Antenna 2dBi
LSR 2.4 GHz FlexPIFA 2dBi
LSR 2.4 GHz FlexNotch 2dBi

The peak gain value is below the stated limit and is therefore compliant to the requirement of the Ordinance regulating Radio Equipment.

Data:

The information provided was taken from the antenna manufacturer's data sheet.

Chip Antenna:

"High Frequency Ceramic Solutions"

2.45 GHz SMD Antenna, EIA 1210, Detuning resilient, Edge Mount Design — P/N 2450AT18D0100

Detail Specification: 9/17/2015 — Page 1 of 6

This antenna is optimal for edge middle mounting; rectangular and circular PCB shape applications, go to pages 2-4 for more info.

General Specifications			
Part Number	2450AT18D0100	Input/Output Power	2W max. (CW)
Frequency (MHz)	2400 - 2500	Impedance	50 Ω
Peak Gain	1.5 dBi typ. (XZ-total)	Reel Quantity	3,000
Average Gain	-1.0 dBi typ. (XZ-total)	Storage Temp	-40 to +85°C
Return Loss	10.0 dB min.	Total Radiation Efficiency[1]	72%
Operating Temperature	-40 to +125°C

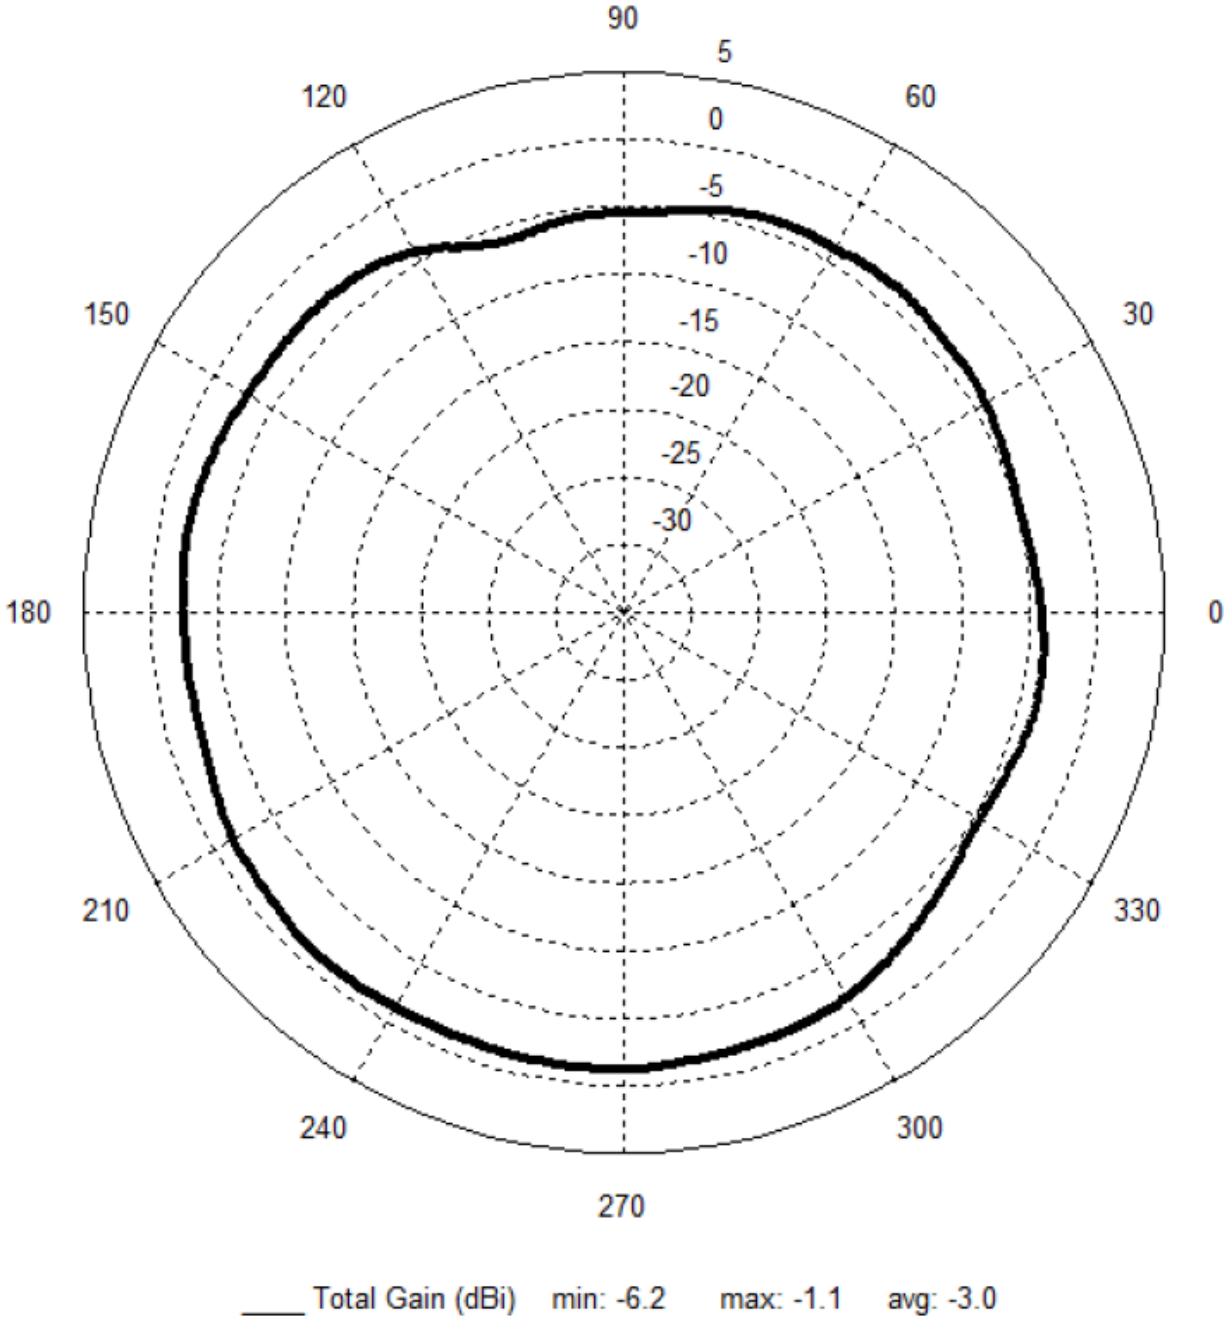

EXHIBIT 9. Occupied Bandwidth and Spreading Bandwidth

Test Engineer:	Khairul Aidi Zainal
Test Date:	5/6/16 – 5/25/16

Requirement:

Article 49.20 of the Ordinance regulating Radio Equipment requires that the minimum spreading bandwidth for DSSS system, which is the 90% bandwidth, be a minimum of 500 kHz.

Article 6, Annex 2 of the Ordinance regulating Radio Equipment requires that the occupied bandwidth, which is defined as the 99% bandwidth, be:

1. 26 MHz for DSSS systems
2. 26 MHz – 38 MHz for OFDM systems

Test note:

1. The EUT was tested at the lowest, middle and high channels.
2. Measurement performed at nominal, +10% nominal and -10% nominal supply voltage.
3. The Occupied Bandwidth measurement function of the Spectrum analyzer was used to perform the measurements.

Result:

The occupied bandwidth value is below the stated limit and is therefore compliant to the requirement of the Ordinance regulating Radio Equipment.

The spreading bandwidth value is above the stated limit and is therefore compliant to the requirement of the Ordinance regulating Radio Equipment.

EXHIBIT 10. Transmitter Spurious Emissions

Test Engineer:	Khairul Aidi Zainal
Test Date:	6/10/16

Requirement:
Article 7 of the Ordinance Regulating Radio Equipment, table 3, sets forth the requirements for Transmitter spurious emissions.

The limits for category WW:

Frequency band	Permissible average power at 1MHz band -width of spurious emission
Lower than 2,387 MHz and higher than 2,496.5MHz	Lower than 2.5 μW
Higher than 2,387 MHz, lower than 2400MHz, and higher than 2,483.5 and lower than 2,496.5 MHz.	Lower than 25 μW

Exclusion bands:
In case of the frequency hopping systems and a combination of hopping and other modulation method(s), the range from 2,374 MHz to 2,509.5 MHz is excluded. For other modulation methods, the range from 2,400 MHz to 2,483.5 MHz is excluded.

Test note:

1. EUT was tested at the lowest, middle and high channels.
2. Measurement performed at nominal, +10% nominal and -10% nominal supply voltage.
3. Testing performed across all modulations/modes.
4. Measurement
    a. RBW=VBW=1MHz
    b. Measure emissions that are within 3dB of the limit (over or under)
    c. Sweep points > 400 points
    d. Detector = RMS (Final measurement), Peak (Pre-scan)
    e. Sweep time >= 1 second (Final measurement), Auto (pre-scan)

Result:

The transmitter spurious emissions of the EUT were more than 6dB below the limit. The EUT is found to be compliant to the requirement of the Ordinance regulating Radio Equipment.

Note:

1. Varying the supply voltage did not change the emissions level.

EXHIBIT 11. Secondary Emissions

Test Engineer:	Khairul Zainal
Test Date:	6/10/16

Requirement:
Article 24 of the Ordinance Regulating Radio Equipment sets forth the requirements for secondary/receiver emissions.

The limits:

30 MHz to 1000 MHz	Lower than 4.0 nW
1000 MHz to 12500 MHz	Lower than 20.0 nW

Test note:

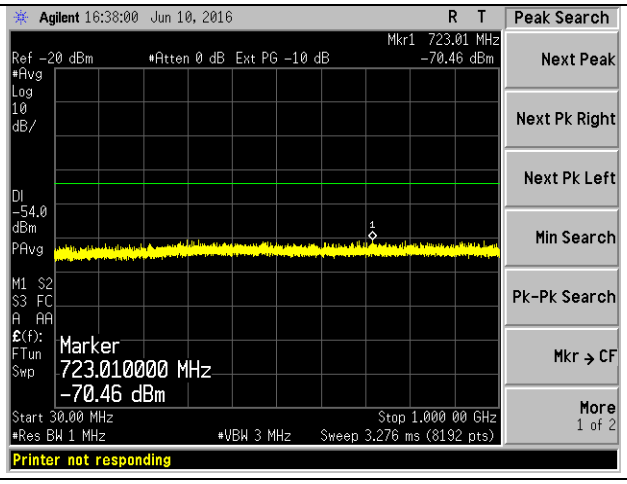
1. EUT was tested at the low, middle and high channels.
2. Measurement performed at nominal, +10% nominal and -10% nominal supply voltage.
3. Emissions did not change with change in supply voltage.

Result:

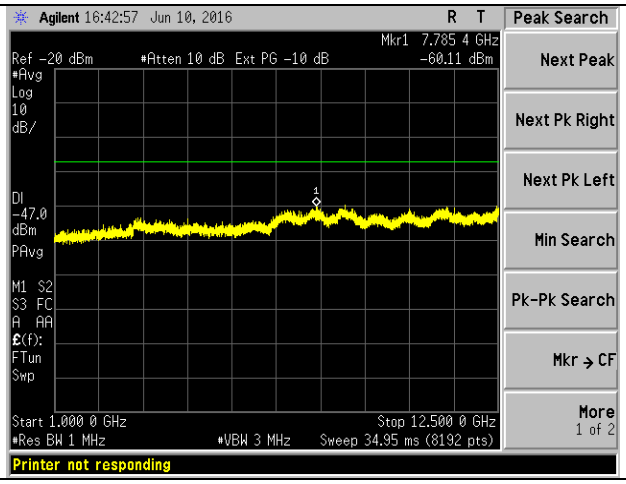
The secondary emissions of the EUT were more than 6dB below the limit. The EUT is found to be compliant to the requirement of the Ordinance regulating Radio Equipment.

Screen Captures:
The plots provided are those at nominal supply voltage only.

Low Channel

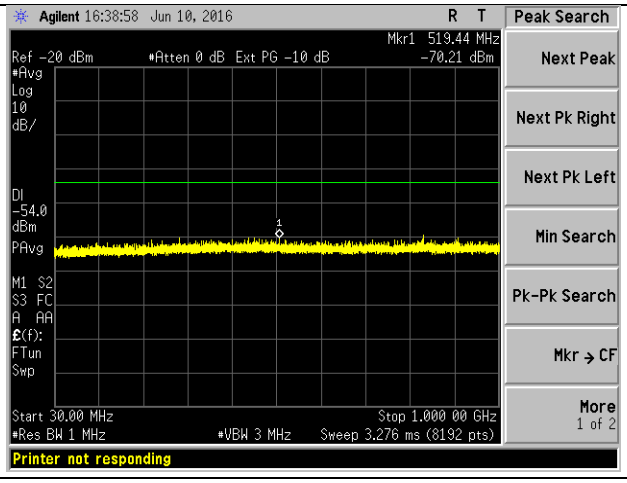


30 MHz to 1000 MHz

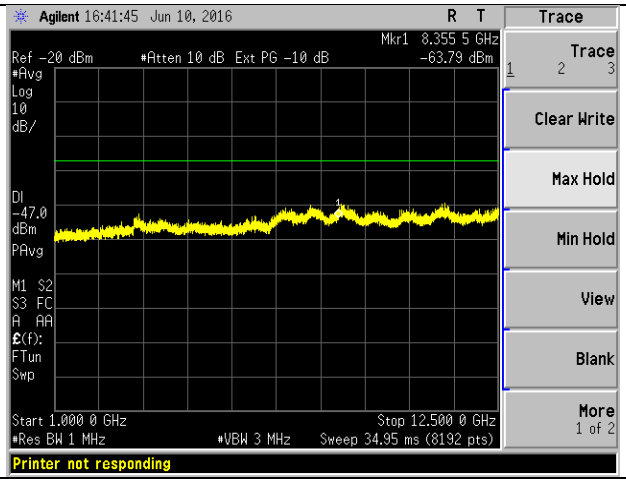


1000 MHz to 12500 MHz

Middle Channel



30 MHz to 1000 MHz



1000 MHz to 12500 MHz

High Channel

	30 MHz to 1000 MHz	1000 MHz to 12500 MHz

EXHIBIT 12. Dwell Time

Test Engineer:	N/A
Test Date:	N/A

Requirement:
Article 49.20 and article 2 of the Ordinance Regulating Radio Equipment sets forth the requirements for dwell time/retention time. This requirement only applies to FHSS systems with direct modulation.

The dwell time of an FHSS system is limited to 0.4 seconds or less.

Result:

Requirement does not apply for this mode (WLAN)

EXHIBIT 13. Spreading Factor

Test Engineer:	Khairul Aidi Zainal
Test Date:	5/6/2016, 5/25/2016

Requirement:
Article 49.20 of the Ordinance Regulating Radio Equipment sets forth the requirements for spreading factor.

The spreading factor for category WW is greater than 5.

Result:

The worst case spreading factor was calculated to be **6.9**. The EUT is found to be compliant to the requirement of the Ordinance regulating Radio Equipment.

EXHIBIT 14. Antenna Power Tolerance

Test Engineer:	Khairul Aidi Zainal
Test Date:	5/26/16 – 6/8/16

Requirement:
Article 14 of the Ordinance Regulating Radio Equipment sets forth the requirements for antenna power tolerance. The antenna power of a device shall be within -80% and +20% of the rated or declared antenna power.

Result:

The measured antenna power for the EUT was within the prescribed range. The EUT is found to be compliant to the requirement of the Ordinance regulating Radio Equipment.

Data:

EXHIBIT 15. Amount of carrier in 1 MHz

Requirement:

Article 2, Item (19) 49.20 1) g / 49.20 3) h Notice 88 Appendix 43, 44, 45 requires that if OFDM is applied the amount of carriers within 1 MHz shall be 1 or more.

Result:

There is more than one (1) subcarrier within 1 MHz hence the EUT is found to be compliant to the requirement of the Ordinance regulating Radio Equipment.

Data:

Amount of carriers within 1MHz = Number of subcarriers/Occupied bandwidth (MHz)

- 802.11g = 52 carriers
- 802.11n = 56 carriers

Note: Since the Occupied bandwidth (99%) is less than the number of defined subcarriers the device is compliant with this requirement.

EXHIBIT 16. "Not Easily To Open"

Requirement:
Article 2 of the Ordinance Regulating Radio Equipment states that the EUT shall be constructed in such a way that the RF parts cannot be reached easily by the user

Result:

The radio module, except for the antenna port, is located under a shield.

The EUT is found to be compliant to the requirement of the Ordinance regulating Radio Equipment.

Data:

EXHIBIT 17. Voltage fluctuation

Requirement:
Article 15-1 of the Ordinance Regulating Radio Equipment states that all measurements shall be carried out with three different supply voltages: The rated nominal value, -10% and +10%. However if the EUT uses an internal voltage regulator, supplying power to all critical parts of the radio circuitry, it is acceptable to restrict the measurements to the nominal supply voltage value under the condition that the regulator is capable to reduce the voltage variation to a value smaller than 1% of input (if the input is varied by 10%).

Result:

All testing were performed with supply voltage varied at ±10% of the nominal voltage. Results show that there was no change to the radio parameters when the supply voltage was varied. The supply voltage variance was between -10% and +10% variance.

EXHIBIT 18. Interference Prevention Function

Requirement:
Article 2 of the Ordinance Regulating Radio Equipment states that the EUT shall have the capability to transmit or to receive the MAC identification automatically, so that sender and receiver shall exclude other equipment.

Result:

Statement from manufacturer:

"The device has a radio module that implements the IEEE 802.11 b/g/n (HT20) protocols, as well as, Bluetooth 2.1 + EDR & 4.0 (BLE) protocols. The module's 48 bit MAC address is transmitted during the connection phase to a master or peer."
