Subject: Declaration of Continued Compliance with RSS-247 through Issue 3 to Issue 4.

To whom it may concern:

We, Ezurio LLC (formerly known as Laird Connectivity LLC) have examined and evaluated the ISED Test Reports [2] [3] associated with the following product with respect to the changes in RSS-247 from Issue 3 to Issue 4.

Model / Marketing Name: BL54L15U Series- BLE+802.15.4+NFC
Model Number: 453-00223, 453-00224
ISED: 3147A-BL54L15U
HVIN: BL54L15U

These test reports and certificates were produced when RSS-247 Issue 3 was in force prior to the end of the transition period which was 6 months beyond the date of July 24, 2025.

The original certifications listed in REL prior to July 24, 2025 remained valid and compliant with RSS-247, Issue 3 and will have continued compliance with RSS-247, Issue 4 by individual inspection. The inspection criteria are based on the changes made between the two Issue versions [1]:

1. Removed the restriction on operation of devices in the 5600 MHz to 5650 MHz frequency range.

Inspection Result (1): The BL54L15U operates only in 2400-2483.5 MHz frequency range, and this change does not affect this device. **[Outcome: No technical compliance impact].**

2. Modified section 6.4 related to hybrid devices to introduce requirements distinguishing hybrid devices from a mere combination of FHS and DTS devices.

Inspection Result (2): The BL54L15U operates only in the 2400-2483.5 MHz as a Digital Transmission System device without Frequency Hopping nor Hybrid Spread-Spectrum Operation. **[Outcome: No technical compliance impact].**

3. Removed the directional antenna/antenna array calculation since the directional gain calculation is covered in the normative reference ANSI C63.10 and the measurement procedure in the accepted KDBs.

Inspection Result (3): The requirement was removed and is covered by ANSI C63.10 and the accepted KDBs. **[Outcome: No technical compliance impact].**

4. Added clarification for LE-LANs operating within vehicles in the bands 5150-5250 MHz and 5250-5350 MHz.
5. Modified point b) in section 7.3.1.3 related to the unwanted emissions of transmitters operating in the 5150-5250 MHz to clarify the requirement.

Inspection Result (4-5): The BL54L15U operates only in 2400-2483.5 MHz frequency range, and this change does not affect this device. **[Outcome: No technical compliance impact].**

6. Added a reporting requirement to section 7.1 for devices implementing transmitter power control.
7. Modified the transmit power control requirement in sections 7.3.1.2 and 7.3.2.2.2.
8. Modified section 7.3.2.1 to introduce the indoor labeling requirement for the unwanted emissions.
9. Modified section 7.3.2.3 to clearly identify the different unwanted emission limits of transmitters operating in the band 5250-5350 MHz.

Inspection Result (6-9): Sections 7.1, 7.3.1.2, 7.3.2.2, 7.3.2.1 and 7.3.2.3 only apply to devices operating in the 5 GHz band. The BL54L15U operates only in 2400-2483.5 MHz frequency range, and this change does not affect this device. **[Outcome: No technical compliance impact].**

Ezurio is committed to maintaining compliance with RSS-247, in accordance with ISSED requirements. The Regulatory Information Guide will be revised to document compliance with the most current requirements. Test Reports and Certificates will be updated as needed.

Please feel free to contact us for any additional information.
