2 Introduction

2.1 General Description

The ST60-2230C/ST60-2230C-Q/ST60-2230C-SS/ST60-2230C-U/ST60-2230C-UU module is a dual band 2x2 802.11ac WLAN plus Bluetooth 5.1 dual mode adapter; it complies with M.2 2230 E-Key standard. The module provides both simultaneous and independent operation of the following:

- IEEE 802.11ac, 2x2 MIMO spatial stream multiplexing with data rates up to MCS9 (866.7 Mbps)
- Bluetooth (Class 1)
- Bluetooth 5.1
- Bluetooth *Smart Ready* operation
- Three-way coexistence for WLAN and Bluetooth

Note: The *Bluetooth®* word mark and logos are registered trademarks owned by Bluetooth SIG, Inc. and any use of such marks by Ezurio is under license. Other trademarks and trade names are those of their respective owners.

A Mobile Wireless System (MWS) serial transport interface provide the functionality for connecting an external Long-Term Evolution (LTE).

The module integrates all WLAN and Bluetooth functionality into a single package which supports low-cost and simple implementation along with flexibility for platform-specific customization. In addition, it has low power consumption radio architecture and proprietary power save technologies to extended battery life.

There are two interfaces for WLAN function:

- SDIO 3.0 – Supports both 1-bit SDIO and 4-bit SDIO transfer modes at full clock range up to 208 MHz
- USB 2.0

In addition, there are three interfaces for Bluetooth function:

- SDIO
- USB 2.0
- High-Speed UART

The ST60-2230C/ST60-2230C-Q/ST60-2230C-SS/ST60-2230C-U/ST60-2230C-UU module also provides a PCM interface for master or slave mode; with the option of an 8-bit or 16-bit width size.

Pins CON[0], CON[1], and CON[2] are used to configure the operation interface.

- ST60-2230C – The interfaces are SDIO/UART (WLAN/Bluetooth) with the configuration setting 000.
- ST60-2230C-SS – The interfaces are SDIO/SDIO (WLAN/Bluetooth) with the configuration setting 001.
- ST60-2230C-U – The interfaces are USB/UART (WLAN/Bluetooth) with the configuration setting 100.
- ST60-2230C-UU – The interfaces are USB/USB (WLAN/Bluetooth) with the configuration setting 101.

The ST60-2230C/ST60-2230C-Q/ST60-2230C-SS/ST60-2230C-U/ST60-2230C-UU M2 module is designed based on the 60-SIPT SiP. It is optimized for high-speed, reliable, and low-power embedded applications. It is integrated with dual-band WLAN (2.4 GHz/5 GHz) and Bluetooth 5.1. Its functionality includes the following:

- Improved throughput on the link due to frame aggregation, RIFS (reduced inter-frame spacing), and half-guard intervals.
- Support for STBC (Space Time Block Codes) and LDPC (Low Density Parity Check) codes.
- Improved 11n performance due to features such as 11n frame aggregation (A-MPDU and A-MSDU) and low-overhead host-assisted buffering (RX A-MSDU and RX A-MPDU). These techniques can improve performance and efficiency of applications involving large bulk data transfers such as file transfers or high-resolution video streaming.
- IEEE 802.11 ac 2X2 MIMO (spatial stream multiplexing with data rate up to MCS9 (866.7 Mbps)).

Additional functionality is listed in [Table 4](#).

15 Mounting

The ST60-2230C/ST60-2230C-Q/ST60-2230C-SS/ST60-2230C-U/ST60-2230C-UU connects to the host via a standard PCI EXPRESS M2 connector. The Kyocera's (www.Kyocera-connector.com) 6411 series provide 1.8 mm, 2.3 mm, and 3.2 mm connector heights and JAE's (<https://www.jae.com/en/>) SM3 series provide 1.2 mm, 2.15 mm, 3.1 mm, and 4.1 mm connector heights.

Because the ST60-2230C/ST60-2230C-Q/ST60-2230C-SS/ST60-2230C-U/ST60-2230C-UU is a single-side component module, we recommend the following part numbers which have 2.3 mm and 3.1 mm connector height):

M.2 Key-E Connector	Connector Height
KYOCERA 24-6411-067-101-894E	2.3 mm
JAE SM3ZS067U310AERxxxx	3.1 mm

The stand-off mating to the recommend 2.3 mm connector from EMI STOP (www.EMISTOP.com) is part number **F50M16-041525P1D4M** and 3.1 mm from JAE (<https://www.jae.com/en/>) is part number **SM3ZS067U310-NUT1-Rxxxx**.

16 RF Layout Design Guidelines/Precautions

The following is a list of RF layout design guidelines and recommendation when installing a Ezurio radio into your device.

- Do not run antenna cables directly above or directly below the radio.
- Do not place any parts or run any high-speed digital lines below the radio.
- If there are other radios or transmitters located on the device (such as a *Bluetooth* radio), place the devices as far apart from each other as possible. Also, make sure there is at least 25 dB isolation between the Bluetooth antenna and the Wi-Fi antenna.
- Ensure that there is the maximum allowable spacing separating the antenna connectors on the Ezurio radio from the antenna. In addition, do not place antennas directly above or directly below the radio.
- Ezurio recommends the use of a double-shielded cable for the connection between the radio and the antenna elements.
- Be sure to put the capacitor on the power pin as close as possible to reduce the radiation issue.
- Use proper electro-static-discharge (ESD) procedures when installing the Ezurio radio module.
- To get maximum throughput when operate at MIMO 2x2, two antennas with at least 25 dB isolation are recommended.
- To avoid negatively impacting Tx power and receiver sensitivity, do not cover the antennas with metallic objects or components.
- Opening/handing/removing must be done on an anti-ESD treated workbench. All workers must be also have undergone anti-ESD treatment.
- The devices should be mounted within one year of the date of delivery.
