CE RF Exposure Report

Equipment : 45 Series WB module with Bluetooth
Model No. : WB45NBT
Brand Name : Laird Technologies
Applicant : Laird Technologies
Address : W66N220 Commerce Court, Cedarburg, Wisconsin 53012, USA
Standard : EN 62311:2008
EN 50385:2002
Received Date : Apr. 19, 2017
Tested Date : May 12 ~ Jun. 30, 2016 (for original test)
May 11, 2017 (for new test)

We, International Certification Corp., would like to declare that the tested sample has been evaluated and in compliance with the requirement of the above standards. The test results contained in this report refer exclusively to the product. It may be duplicated completely for legal use with the approval of the applicant. It shall not be reproduced except in full without the written approval of our laboratory.

1 General Description

1.1 Information

This report is issued as a supplementary report to original ICC report no. EA350301-02. The main difference is changing address of applicant.

1.1.1 Specification of the Equipment under Test (EUT)

2 RF exposure evaluation

2.1 Scope

The object of this standard is to demonstrate the compliance of such product with the basic restrictions (directly or indirectly via compliance with reference levels) related to general public exposure to radio frequency electromagnetic fields.

2.2 Normative References

This European Standard incorporates by dated or undated reference, provisions from other publications. These normative references are cited at the appropriate places in the text and the publications are listed hereafter. For dated references, subsequent amendments to or revisions of any of these publications apply to this European Standard only when incorporated in it by amendment or revision. For undated references the latest edition of the publication referred to applies (including amendments).

EN 50383, Basic standard for the calculation and measurement of human exposure to electromagnetic fields from radio base stations and fixed terminal stations for wireless telecommunication systems (110 MHz – 40 GHz).

2.3 Conditions for Calculation and Measurement

The station shall be operating in accordance with the manufacturer’s specification. Calculations and/or measurements on base stations intended for use with external antennas shall be performed for at least one typical system configuration consisting of a combination of the base station and an antenna system representative of the intended final use.
2.4 Limits

The device shall comply with the relevant limits for general public exposure specified as basic restrictions or reference levels in the Council Recommendation 1999/519/EC as below table.

Reference levels for electric, magnetic and electromagnetic fields
(0 Hz to 300 GHz, unperturbed rms values)

<table>

</tbody>
</table>

Notes:

1. $f$ as indicated in the frequency range column.

2. For frequencies between 100 kHz and 10 GHz, $S_{eq}$, $E'$, $H'$, and $B'$ are to be averaged over any six-minute period.

3. For frequencies exceeding 10 GHz, $S_{eq}$, $E'$, $H'$, and $B'$ are to be averaged over any 68 / $f_{10}$ -minute period ($f$ in GHz).

4. No E-field value is provided for frequencies < 1 Hz, which are effectively static electric fields. For most people the annoying perception of surface electric charges will not occur at field strengths less than 25 kV/m. Spark discharges causing stress or annoyance should be avoided.
2.5 Evaluation Formula for Far-Field

Follow below formula to evaluate E-field strength.

\[ E = \frac{\sqrt{30 \times P \times G}}{R} \]

Where

P(W) is the input power of antenna
G is the gain of antenna
R(m) is the distance between the human body and the antenna

3  Test laboratory information

Established in 2012, ICC provides foremost EMC & RF Testing and advisory consultation services by our skilled engineers and technicians. Our services employ a wide variety of advanced edge test equipment and one of the widest certification extents in the business.

International Certification Corp (EMC and Wireless Communication Laboratory), it is our definitive objective is to institute long term, trust-based associations with our clients. The expectation we set up with our clients is based on outstanding service, practical expertise and devotion to a certified value structure. Our passion is to grant our clients with best EMC / RF services by oriented knowledgeable and accommodating staff.

Our Test sites are located at Linkou District and Kwei Shan Hsiang. Location map can be found on our website [http://www.icertifi.com.tw](http://www.icertifi.com.tw).
