

Product Change Notification

This form provides authorisation for changes to a product design or specification and acts as your authorised acceptance of those changes.

NOTIFICATION DATE: 13/08/15
LAIRD PRODUCTS AFFECTED: All BTM411, BTM431, BTM441, BTM443, BTM461 variants
TYPE OF CHANGE: Product label change
EFFECTIVE DATE: 13/08/15

This document is to advise customers that Laird has effected a product label change to all stated part numbers and associated variants. This change was in response to ensuring clear and precise printing of the unique element of the Bluetooth MAC address on the product label. The Bluetooth MAC address used in Laird modules is made of 2 parts, totalling 12 alphanumeric characters:-

0016A4 – The first 6 alphanumeric characters are the manufacturer ID and never change.
XXXXXX – The following 6 characters change per module.

Laird will no longer print the full 12 alpha numeric characters, only the final 6. The internally programmed MAC address is still the full 12 alphanumeric characters, only the printed label is shortened to improve clarity of the printed information.

The drawing below shows the prior label on the left and the new label on the right.
